WALLBLIND[®]

Wheeled Acoustic Blind

WBL₂₀₀
200x120x14cm
51.4 Kg

WBL₂₀₀
200x120x14cm
51.4 Kg

WBLG₂₀₀
200x120x14cm
62 Kg

FEATURES

- Wheeled Acoustic Blinds
- NRC: 0.66
- Solid Structure, excellent insulation
- Both models with two acoustically different faces (diffusing and absorbing)
- Ideal to separate and surround instruments
- Place: recording and rehearsal studios
- Installation: easy to install on the base provided
- Package: 2 units
- Dimensions: 200 x 120 x 14 cm
- WBL: Opaque Model
- WBLG: Glass Model
- Available in different colours

Models:

	H	W	D	Kg
WBL200	200 cm	120 cm	14 cm	51.4
WBLG200	200 cm	120 cm	14 cm	62

WALLBLIND®

Wheeled Acoustic Blind

Studios' large rooms are adequate to record joint "takes", with all the band's elements playing at the same time. The WALLBLIND® is recommended to physically divide the musicians or the several sound sources between each instrument or amplifier, thus minimizing both the complicity and sound contamination of the several instruments in relation to the microphones.

The WALLBLIND® is a portable acoustic blind system which is ideal for your recording room. It provides a remarkable acoustic division while permitting to choose the most pleasant face for the instrument that it surrounds. You can choose from two faces with different acoustic and aesthetic features: one side has a high-density EPS profile, which is hardened with a ceramic painting film, with good diffusing features, while the other side has an optimised profile cut for open-cell acoustic foam, thus being quite more absorbent.

This versatility offers therefore several loudness and modulation options for good sound recording in your room.

This product has a resistant rigid structure with big wheels and allows several modules to be coupled with quite tight union angles. In addition to the standard sizes, models with a glass viewfinder or other sizes, as needed, are also available upon order.

As salas grandes dos estúdios são propícias à gravação de *takes* conjuntos, com todos os elementos da banda a tocarem ao mesmo tempo. O WALLBLIND® é recomendado para a divisão física dos músicos ou das várias fontes sonoras, entre cada instrumento ou amplificador, permitindo assim minimizar a complicidade e a contaminação sonora dos vários instrumentos em relação aos microfones.

O WALLBLIND® é um sistema de biombo acústico amovível ideal para ter na sua sala de captação. Exerce uma divisão acústica notável enquanto permite a escolha da face mais agradável para o instrumento que está a circular. Tem à escolha duas faces caracterizadas acústica e esteticamente de forma diferente; de um lado um perfil em EPS de alta densidade enrijecido com a película de pintura de cerâmica com boas características difusoras, do outro lado um perfil de corte otimizado para espuma acústica de célula aberta por isso bem mais absorvente.

Esta versatilidade oferece assim diversas opções de sonoridade e modulação da sua sala para uma boa captação.

Esta peça tem uma estrutura rígida resistente com rodas grandes e possibilita o acoplamento de vários módulos com ângulos de união bastante apertados. Além das dimensões *standard*, também estão disponíveis, mediante encomenda, modelos também com visor em vidro ou outras dimensões consoante as necessidades.
